**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 17-28, drawn to a non-mucin synthetic compound, classified in class 536, subclass 55.1.
- II. Claim 8, drawn to a method of making a galactopyranose, classified in class 536, subclass 22.1.
- III. Claims 29-32, drawn to immunotherapy with the non-mucin synthetic compound, classified in class 424, subclass 278.1.
- IV. Claims 33-36, drawn to monoclonal antibodies against the non-mucin synthetic compound, classified in class 530, subclass 388.1.
- V. Claims 37-44 and 53-56, drawn to anti-tumor agent and a method of treating a tumor, classified in class 424, subclass 277.1.
- VI. Claims 45-52 and 57-60, drawn to an anti-HIV agent and a method of treating HIV, classified in class 424, subclass 208.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the antibody and the non-mucin synthetic compound do not share a common chemical structure or function.

Art Unit: 1648

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the method of making in group II is drawn to making a sugar, which is structurally distinct from the non-mucin synthetic compound of group I. The method cannot be used to make the non-mucin synthetic compound of group I.

Inventions III and V and VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product is used to treat unrelated diseases and conditions in different populations. The method of group III may be used to stimulate the immune system of a healthy subject or a subject suffering from an immune abnormality or infection. The method of group V is used to treat subjects with any type of tumor or cancer and group VI is drawn to treating subjects infected with HIV. Each of the conditions exhibit distinct pathology, symptoms and etiology that must be considered for any treatment regiment.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different classification, restriction for examination purposes as indicated is proper. A search for any of the groups is non-overlapping with the subject matter claimed in other groups.

Art Unit: 1648

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
